

Customer Auto Replenishment Service (CARS)

The **TALL** Group of Companies

Customer Auto Replenishment Service (CARS)

Customer Auto Replenishment Service (CARS) is a multi-location cheque or credit stock control system that automatically manages stock supply across a number of locations.

The system is flexible and can be tailored to the needs of the organisation, incorporating a 'print on demand' element if required. Varying usage rates and volumes can be managed electronically thus enabling you to reduce stock levels, free up valuable space and significantly reduce your administration and order processing costs.

Detailed management information can be provided to suit your requirements.

How The Service Works

A database is established that details each of the locations and their reorder levels. These are agreed, either using a minimum and maximum quantity, or a three-month rolling average calculated by the system.

A Cheques/Credits Issued File, that identifies usage, is securely transmitted to the **TALL** Group at an agreed interval. This information is cross-referenced to location serial or ID number.

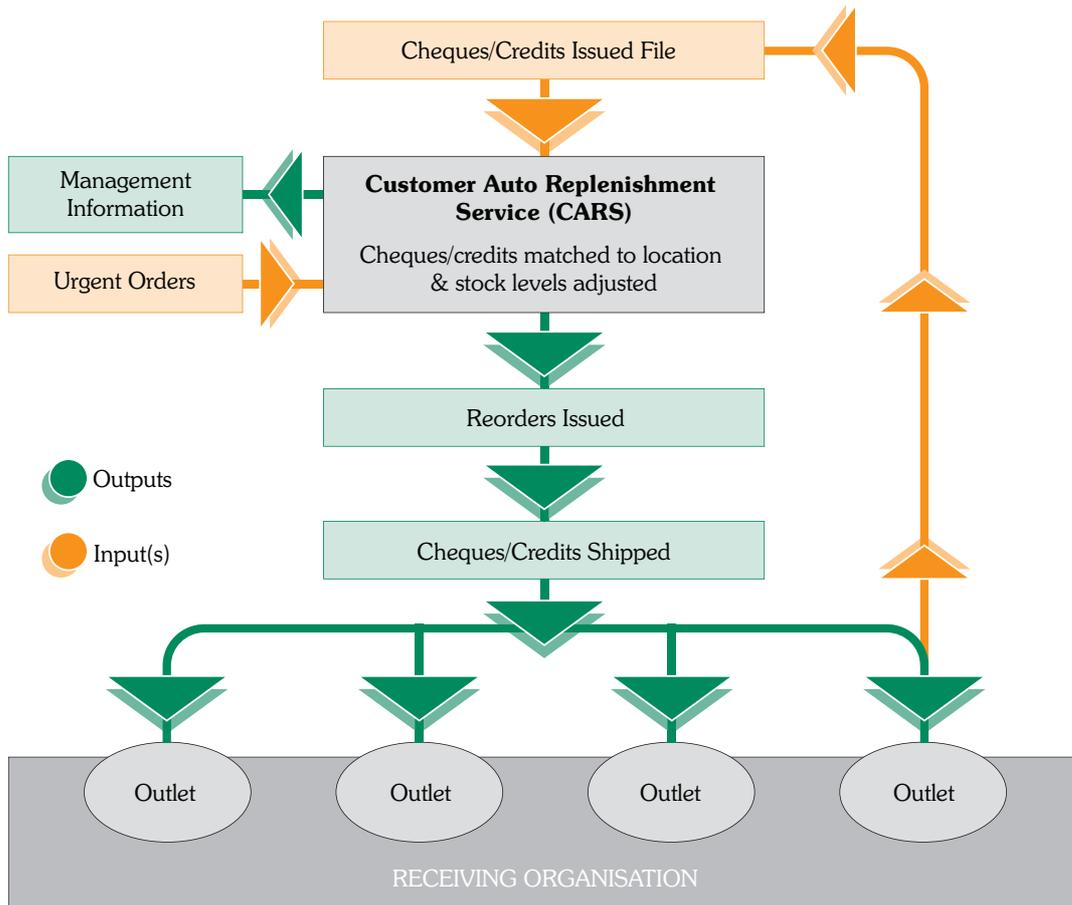

Then the CARS system automatically recalculates stock levels by locations, compares this to the predetermined reorder level and issues the necessary orders for the day.

A secure carrier delivers stock, with receipt being confirmed by the location directly back to the **TALL** Group.

Benefits To Your Business

- Secure cheque/credit supply management
- Timely and automatic cheque/credit replenishment
- Reduced stock holding and administration costs
- Detailed management reports available as and when required
- Service is tailored to the needs of your organisation

The Process

Customer Testimonial

“Moving to a centralised bank account we needed to find a solution that would allow individual establishments to have a constant supply of cheque books. It was important to have a system that would be able to automatically send out new cheque books when stock was running low. This service offered an ideal solution of managing the number of cheques used by an establishment through daily reports from our systems, together with information stored on their database.

This operation runs very smoothly and on the odd occasion when we have made an urgent request they have ensured that a new cheque book is received within a few days.

We were pleased with this service and therefore we have recently started using the same operation for our Credit Book ordering. This has saved a lot of manual intervention of having to make requests for new stock, so therefore has cost and time benefits for our business”.
